

Still think we need more research to find a cure for cancer? It was found and proven by William Donald Kelley half a century ago

SUMMARY: Dentist William Donald Kelley discovered a cancer cure after he cured himself of pancreatic cancer in the mid-1960s. His approach is based on lifestyle changes: a customized diet and nutritional supplements tailored to a patient's metabolic type (to correct a metabolic imbalance), coffee enemas (for detoxification), and pig pancreatic enzymes (for destruction of the tumor, according to a theory proposed by biologist John Beard). Dr. Kelley started treating patients and had had a successful private practice until the early 1980s. By this method—and its version later refined by Nicholas J. Gonzalez, MD, and Linda L. Isaacs, MD—at least several hundred patients with various cancers even at advanced stages have been cured directly (documented cases), and it is estimated that many thousands or perhaps tens of thousands of patients got rid of cancer on their own, by following instructions in Dr. Kelley's book "One Answer to Cancer." The present paper contains only literary references such as case reports, the history and description of this method, and arguments against double-blind randomized controlled trials. Such trials are not designed to register a cancer cure and instead assess short-term small changes in symptoms, which are the worst kind of evidence, susceptible to numerous distortions and manipulations.
